Remote/Community Isolations:

Community Isolation, Community of Coleville, Mono County

On 09/07/17 at 1728 hours, the Cal OES 9-1-1 Branch notified the California State Warning Center (CSWC) of a Community Isolation in Coleville, Mono County, due to a fiber cable burned by wildfires. The isolation is affecting landline 9-1-1 services only. The Public Safety Answering Point (PSAP) is operational. California Unified Emergency Association (CUEA) and the Cal OES 9-1-1 Branch have confirmed cellular 9-1-1 services are not affected and the population affected is approximately 308 customers.

- Wildfires have burned through copper, telephone poles, and approximately 16,000 ft. of fiber in the Coleville area
- The Cal OES Fire Duty Officer (FDO) and Law Duty Officer (LDO) have confirmed that Mono County and Coleville residents are safe and that the fire is moving away from Coleville into Nevada.
- Per the Cal OES Southern Duty Officer (SDO), Mono County has made no request for state assistance at this time.
- At 2148 hours, Cal OES 9-1-1 Branch advised that damage to the fiber, copper and poles in Coleville is more severe than anticipated.
- Technicians will continue to work through the weekend with an estimated restoral timeframe of Monday, 09/11/17.
- If the status of either landline or cellular service should change, Cal OES 9-1-1 Branch will be notified immediately.
- The CSWC made notifications per SOP.
- Cal OES Duty Officers have been advised and will continue to monitor.

CDPH ZIKA VIRUS UPDATE

EXECUTIVE SUMMARY

The Medical and Health Coordination Center (MHCC) continues to be activated in response to Zika virus disease. The California Department of Public Health (CDPH) and Emergency Medical Services Authority (EMSA) are currently the only Emergency Function 08 (EF 08) partners at the state level reporting on this activation.

The MHCC is coordinating with EF 08 partners, healthcare facilities and local health departments (LHDs) to ensure responses to inquiries are timely and accurate.

CDPH and EMSA Duty Officer Programs are monitoring Zika virus disease after hours and communicating with the Regional Disaster Medical and Health Coordination (RDMHC) and the Medical Health Operational Area Coordination (MHOAC) Programs throughout California.

As of Friday, 09/01/17, there have been 588 travel-associated Zika virus infections in California. No new cases have been reported since the last situation report dated 08/24/17. CDPH centers and programs continue to monitor Zika virus disease and provide information to the MHCC related to their specific activities on a weekly basis.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A low will form just off the California coast later today and drift south over the weekend. Higher pressure will be able to move into Northern California by the end of the weekend and early next week for a warming and drying trend. The low will be on the move north again Tuesday, and by the middle of next week, cooler, moister conditions will return to the region. Isolated daily afternoon and evening mountain showers or thunderstorms are possible each day, although they seem unlikely Sunday except perhaps in the Tahoe area. Shower and thunderstorm activity are expected to increase again early next week and continue the rest of the week. Temperatures will cool again to near seasonal normals next week, which for the warmest inland areas will be in the lower 90s. Even daytime relative humidity (RH) will remain moderately high for the most part with better overnight recoveries. The chance of large fires developing will be on the decrease over the next 7 days, but there will still be plenty of potential for new fire starts or holdovers to develop. Some periods of light offshore winds will become possible in a few days as the high pressure system moves into place.

SOUTHERN CALIFORNIA

An area of low pressure currently off the Central California Coast will drop south to off the Southern California Coast by Sunday and then shift north and inland over Central California by Wednesday. This area of low pressure will bring scattered showers and thunderstorms to the mountains and deserts (including the Central Coast mountains) through Saturday. Widespread showers and thunderstorms will affect the entire region Sunday as the low pushes south. The shower and thunderstorm threat will most likely end across most of Southern California by Monday afternoon, but widespread shower and thunderstorm activity will continue across Central California through Tuesday. Isolated showers and thunderstorms will be limited to the Sierra and Northern Deserts Wednesday as the low pressure area pushes inland. Most locations will receive between a tenth inch and a half inch of rainfall with this low, but some mountain locations will receive up to an inch of rainfall. Maximum temperatures will be near normal through early next week, with mid 70s to mid 80s across the mountains and mid 80s to mid 90s in the valleys. Minimum humidity will be above 20% across the region through early next week. The area of low pressure that moves inland over Central California Wednesday will be replaced by another low pressure area late next week. This will increase the number of showers and thunderstorms across the region. Temperatures will be a little below normal Wednesday through the end of next week. Winds will be light through the end of next week, except there will be strong and erratic winds in and near any thunderstorms that develop.
